Gypsum False Ceiling

Gypsum false ceilings are innovative interior design solutions that utilize **gypsum boards to create seamless and visually appealing ceiling structures**. Additionally, they provide excellent acoustic and thermal insulation properties, enhancing comfort levels within the space.

VOX False Ceiling

VOX ceilings are made from high-quality PVC and are known for their durability and versatility. They don't require termite treatment, and they are resistant to fungi and algae growth, making them a practical and sustainable choice for a variety of spaces. Additionally, **VOX ceilings are incredibly unique, with a variety of designs** and materials available.

Plasters Of Paris (Pop) False Ceiling

Pop false ceilings, also known as plaster of Paris ceilings, are a popular choice for **modern interior design**. Made from gypsum plaster, they offer versatility in design, allowing for intricate patterns and lighting effects. Pop false ceilings are lightweight, durable, and provide a sleek, seamless finish to any space.

Armstrong False Ceiling

Armstrong False Ceiling offers innovative and **high-quality ceiling solutions for residential, commercial, and industrial spaces**. With a focus on durability, aesthetics, and functionality, Armstrong False Ceiling products are designed to enhance any environment while providing superior performance.

Aerocon False Ceiling

With advanced technology and superior materials, Aerocon False Ceiling products provide excellent acoustic performance, fire resistance, and thermal insulation. Choose Aerocon for reliable, stylish, and sustainable ceiling solutions.

Grid False Ceiling

Grid false ceilings, also known as suspended ceilings or drop ceilings, are a **popular interior design solution** characterized by a grid framework suspended from the main ceiling. They are commonly used in commercial spaces, offices, and residential buildings to enhance aesthetics, acoustics, and concealment of wiring and ductwork.

Sound Proof False Ceiling

Soundproof false ceilings are designed to **minimize noise transmission between rooms or from external sources**, creating a quieter and more peaceful environment. By incorporating specialized materials and construction techniques, these ceilings effectively absorb and block sound, enhancing privacy and comfort in residential and commercial spaces.

Gypsum Board Wall Partitions

A gypsum board wall partition is a lightweight and versatile solution for dividing interior spaces. Gypsum board partitions are customizable and can be easily cut, shaped, and finished to accommodate various design needs. Additionally, **gypsum board partitions are cost-effective and environmentally friendly**, making them a popular choice in modern construction projects.

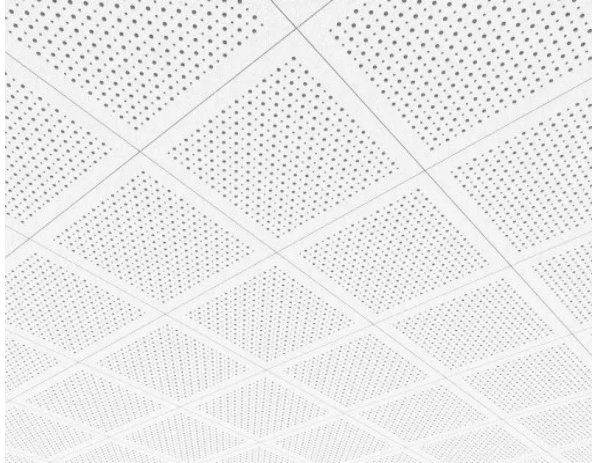

PVC False Ceiling and Wall Plank

PVC False Ceiling Planks give a wood like finish and can be used horizontally or vertically on both ceilings and walls. They are available in 3 colors – Teak wood, Pine Wood and White. Jitex PVC False Ceiling Planks can be used for both domestic and commercial spaces. These PVC False Ceiling planks can be used in bathrooms, kitchens or any room in the house; ideally used in rooms where the level of moisture is very less or the space has poor ventilation facility in order to give the room a very clean fresh look.

Acoustic Perforated Ceiling

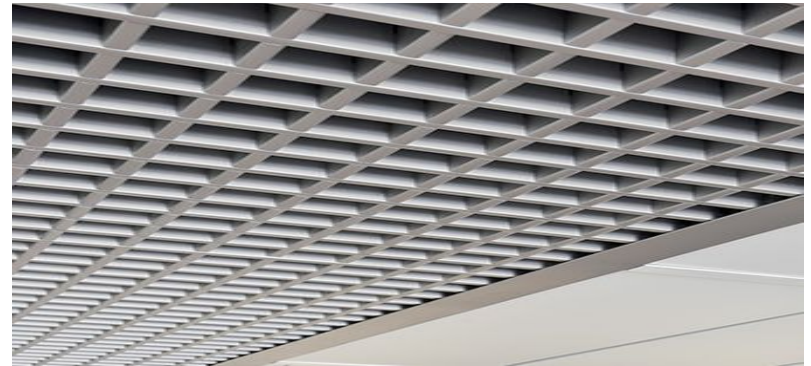

Perforated Ceiling Tiles are designed to suit standard suspended grid systems, typically in commercial construction. Suitable for a range of commercial environments where sound absorption is required, Perforated Ceiling Tiles are often used in shopping centres, offices, restaurants, libraries and galleries.

Perforated Gypsum panels have excellent acoustic features and can be used for both ceilings and walls. Plaster boards with different perforations in symmetric form not only enhance the acoustics but also increase the aesthetics of any space.

Open Cell Ceiling

The Open Cell ceiling system creates a simple **open plan ceiling design**. **These panels can be easily installed or removed**, providing quick access to the ceiling plenum. Quality performance is exquisitely exhibited in the open cell metal ceiling system that has created opportunities to be installed at corporate offices, transportation sector and hospitality areas. Essential to enhance the beauty and grace of the space, offered ceiling is processed under the guidance of our adroit professionals using quality assured product and progressive technology in sync with set industry norms. Our provided ceiling is ideal for commercial and residential places.

Linear Ceiling

Linear Metal Ceiling System is the right choice for creating dynamic ceilings and glamorizes the entire exterior or interior appeal. It is laced with extensive specifications. Well suited to meet the interior as well as exterior needs, Linear Metal Ceiling System allows variability of designs. These contemporary panels have the brilliance to create dynamic ceilings assisted with gentle rolling waves. Its snap-up design provides boundless access with a trifling plenum depth obligation. Each and every aspect of Linear Metal Ceiling System holds importance for controlling the sound system effectively and allowing functioning of tasks without difficulty.

U Shape Baffle Ceiling

Linear Baffles is an attractive, linear ceiling system that screens the open plenum beautifully. It has Clean crisp detailing and detachable suspension with fully adjustable spacing. It is a Robust, engineered system that is quick and easy to install. The **baffle ceiling system introduces unique design element to any space** and is a striking addition whether it is installed throughout an entire room or just serves as an accent. Both the style and spacing is customizable and the system can also be installed on either vertical or curved surfaces. The Baffle ceiling panels can be easily installed and uninstalled for accessibility. We are instrumental in delivering an extensive range of Linear Cell Ceiling that are classy in looks and are designer in nature. They have smooth texture and are classy in appearance.
